

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) An information display system comprising:
plural display devices that each continue to display an image after cutoff of electric power; possess setting information and have a function of controlling whether or not they display information in accordance with selection information which is generated based on the setting information; and

a connector for delivering electric power and for sending information from an information sending meansunit to the plural display meansdevices, wherein the information sent from the information sending meansunit is displayable on the plural display meansdevices, wherein the plural display devices are detachably attached to the connector, and exchange information with the information sending meansunit by a wireless system.

2. (Previously Presented) An information display system according to Claim 1, wherein the information displayed on the display devices is kept even in a state where the display devices are detached from the connector.

3. (Currently Amended) An information display system according to Claim 1, wherein the ~~display devices possess setting information and have a function of controlling whether or not they display information, in accordance with selection information from the information sending means, and the~~ information sending meansunit detects the setting information possessed by the display devices and sends the selection information along with the information to-be-displayed on the basis of the setting information, thereby to display the information on selected ones of the display devices.

4. (Currently Amended) An information display system according to Claim ~~3~~1, wherein the setting information contains information on a size of the display devices.

5. (Canceled)

6. (Currently Amended) An information display system comprising:

plural display devices that each continue to display an image after cutoff of electric power, and have a function of controlling whether or not they display the information in accordance with selection information which is generated based on setting information possessed by the display devices;

plural information writing means for writing information to the display devices; and

a connector for delivering electric power and for sending the information, which is to be displayed by the plural display devices, to the plural information writing means, wherein the information sent from an information sending ~~means~~unit can be displayed on the plural display devices, wherein the plural display devices are detachably attached to the connector, and exchange information with the information sending ~~means~~unit by a wireless system.

7. (Previously Presented) An information display system according to Claim 6, wherein the display devices are detachably attached to the information writing means, and the displayed information is kept even in a state where the display devices are detached from the information writing means and the connector.

8. (Currently Amended) An information display system according to Claim 6, wherein ~~the display devices have a function of controlling whether or not they display the information, in accordance with selection information from the information sending means,~~ and the information sending ~~means~~unit adds selection information, for selecting the information in the information writing means, to the information to-be-displayed and sends them together.

9. (Currently Amended) An information display system according to Claim 6, wherein the information writing means has a function of selecting the information sent from the information sending ~~means~~unit, and the information sending ~~means~~unit adds selection information for selecting the information in the information writing means, to the information to-be-displayed and sends them together.

10. (Currently Amended) An information display system according to Claim 9, wherein the information writing means holds setting information therein, and the information sending ~~means~~unit has a function of collecting the setting information from the plural information writing means and adds the selection information to the information to-be-displayed on the basis of the collected setting information.

11. (Previously Presented) An information display system according to Claim 10, wherein the information writing means contains information on presence or absence of the display device, as the setting information.

12. (Currently Amended) An information display system according to Claim 6, wherein the information sending ~~means~~unit and the information writing means exchange information by a wireless system.

13. (Currently Amended) An information display system according to Claim 1, further comprising:

image pickup means for reading an image, wherein the information sending ~~means~~unit sends the image read by the image pickup means, as the information which is to be displayed on the display devices.

14. (Currently Amended) An information display system according to Claim 1, wherein the information sending ~~means~~unit turns externally received information into an image and sends the image as the information which is to be displayed on the display devices.

15. (New) An information display system according to Claim 1, wherein the setting information includes an identification number unique for each particular display device.
